

Kitchen

Look at a recipe. How many different types of measurements are there?

Find some small containers. Estimate which hold the most/least. Now measure using an egg cup. Count how many egg cups in each container.

Estimate how many items in a packet (e.g. biscuits). Count them. How close was your estimate?

Look at some packages and some tins. How much do they weigh? Which is the lightest/heaviest?

Help set the timer on the microwave to cook different items.

Cut your toast into quarters. How many quarters are there altogether? Eat a piece, how many are left?

Look at some cooking times on some food packets. Which takes the longest to cook? Which takes the shortest to cook. If it goes in now, what time will it be finished?
